DETAILED ACTION

Status of the Claims

Claims 1-4 are currently under examination.

Claim Rejections - 35 USC § 102/103

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary sikl in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-4 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Solomon (US 4,145,232).

In regards to claims 1-3, Solomon ('232) discloses a process for carburizing steel in a furnace with mixed gases including hydrocarbon components such as methane, propane and butane (abstract and col. 5, lines 9-50). Solomon ('232) also discloses adding ammonia to the carburizing atmosphere in an amount of about 1 to about 10 percent by volume (col. 8, lines 17-27). Solomon ('232) further discloses that steel components would be placed into a furnace which would contain a muffle made of an

Application/Control Number: 10/586,626

Art Unit: 1793

alloy of about 76% nickel, 16% chromium, and 6% iron (col. 8, lines 31-48) and carbonitriding would take place at a temperature of from 1200°F to 2200°F (650°C to 1205°C), which would meet the limitation of "heating a mixed gas to at least 300°C" as instantly claimed. With respect to the recitations "to form HCN under catalytic action of said metal member" and "causing the thus-formed HCN to act on said surface of said metal member", although Solomon ('232) is silent with respect to the formation of HCN, the Examiner asserts that this compound would form and act on the surface of the metal member because Solomon ('232) discloses the same reactants and the same temperature conditions. MPEP 2112.01 I.

With respect to the recitation "wherein HCN is formed to at least 100 mg/m³ in said heating furnace and a furnace atmosphere gas has a dew point not higher than 5°C" of claim 4, the Examiner asserts that this would be expected because Solomon ('232) discloses the same reactants and the same temperature conditions. MPEP 2112.01 I.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jessee Roe whose telephone number is (571) 272-5938. The examiner can normally be reached on Monday-Friday 7:30 AM - 4:30 PM.

Art Unit: 1793

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Dr. Roy V. King can be reached on (571) 272-1244. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

/John P. Sheehan/ Primary Examiner, Art Unit 1793
